PROFESSIONAL SUMMARY

SRE Engineer with 7+ years of expertise in end-to-end infrastructure monitoring, incident management, and production support within the banking industry. Progressed from L1 incident response to leading the Octopus Squad SRE Task Force at PT Bank SMBC Indonesia Tbk, where I designed Jenkins CI/CD pipelines for monitoring deployments, built observability stacks (SolarWinds, ELK, Grafana), and developed Python/Bash automation for proactive anomaly detection — reducing operational toil by ~40% and achieving zero SLA breach in 2024. Proficient in AS400 Core Banking, SQL-based data remediation, and cross-functional collaboration with Business Analysts, QA, and vendors throughout the full SDLC. Actively expanding into Cloud and AI technologies with Microsoft Azure and Fabric certifications.

WORK EXPERIENCE

IT Monitoring & Service Recovery Engineer (Octopus Squad – SRE Task Force) *May 2024 – Present* PT Bank SMBC Indonesia Tbk

- Designed end-to-end observability stack using SolarWinds, Elasticsearch, and Grafana — providing real-time visibility across 100+ servers and business-critical banking applications.
- Automated monitoring configuration deployments via Jenkins CI/CD pipelines, reducing manual deployment effort by ~60% and ensuring consistent, version-controlled infrastructure changes.
- Developed Python and Bash automation scripts for proactive anomaly detection, cutting Mean-Time-to-Detect (MTTD) by ~40% and significantly reducing on-call toil.
- Implemented and maintained a robust monitoring ecosystem to ensure early detection of system anomalies and performance issues — including threshold tuning in collaboration with sysadmins and network engineers.
- Built Tableau dashboards for infrastructure capacity planning, enabling data-driven resource allocation decisions for management across production systems.
- Configured effective alerting systems and escalation procedures to enable fast incident resolution and minimize downtime.
- Led technical coordination during P1 incidents, achieving service restoration within banking SLA targets (MTTR < 30 minutes) with zero SLA breach in 2024.
- Performed regular health checks, updates, and patch management of monitoring tools to ensure consistent reliability and availability.

🔥 **Impact:** *Reduced operational toil by ~40% through automation. Zero SLA breach in 2024 across all P1 incidents.*

IT Production Support L2 PT Bank SMBC Indonesia Tbk

Aug 2020 – May 2024

- Managed complex application incidents via ticketing platforms (ServiceNow, Jira), ensuring resolution within SLA and minimizing business disruption.

- Investigated and resolved system issues through in-depth troubleshooting, bug analysis, and quick workaround deployment; delivered clear technical documentation for all fixes.
- Conducted Root Cause Analysis (RCA) on application logs for 50+ recurring production issues, producing actionable documentation and permanent fixes.
- Coordinated closely with Business Analysts, QA teams, and vendors to address application problems before production deployment — supporting full SDLC practices including UAT.
- Monitored system integrations using Grafana, Elastic (ELK), API logs, and middleware platforms to detect and act on system errors proactively.
- Executed advanced SQL queries for data validation, data remediation, issue diagnosis, and technical reporting for business stakeholders.
- Utilized AS400 Core Banking System to review application data, execute queries, and support daily operations.
- Documented incident resolution steps, technical updates, and knowledge base articles in Jira and Confluence to build team knowledge base.
- Participated in 24/7 on-call rotation to support critical incident handling and emergency response for banking operations.
- Participated in project activities including documentation, task tracking (Jira), UAT support, and adherence to SDLC best practices.

 **Impact:** Resolved 50+ recurring production issues through deep-dive RCA, improving system stability and reducing repeat incidents.

IT Production Support L1 PT Bank SMBC Indonesia Tbk

Aug 2018 – Aug 2020

- Handled Level 1 incidents via ServiceNow and Jira; performed initial triage and escalated to L2/L3 teams as needed.
- Executed standard recovery procedures including service restarts, log error checks, and basic troubleshooting of applications and services.
- Supported ITCCMS system to verify ATM card linkage with customer bank accounts and ensure backend accuracy.
- Communicated with internal users to understand technical issues and provide initial support.
- Wrote and executed SQL queries for data validation, issue diagnosis, and reporting purposes.
- Utilized AS400 Core Banking System to review application data, execute queries, and support daily operations.

TECHNICAL SKILLS

Monitoring & Observability	Grafana, SolarWinds, Elasticsearch / ELK Stack, Tableau, Kibana
DevOps & CI/CD	Jenkins, Git, GitHub, CI/CD Pipeline Design, Infrastructure as Code (IaC) concepts

SRE Practices	SLO/SLI/SLA Management, MTTR/MTTD Optimization, Incident Management, On-Call Rotation, Runbook Creation, Chaos Engineering (concepts), Capacity Planning
Languages & Scripting	Python, Bash, SQL
Cloud & Data Platform	Microsoft Azure, Microsoft Fabric, Azure AI, Azure Monitor (concepts)
Infrastructure & OS	Linux Administration, AS400 Core Banking, Windows Server, Oracle, SQL Server
Incident Management	ServiceNow, Jira, Confluence, Root Cause Analysis (RCA), ITIL concepts
API & Testing	Postman, API Log Analysis, Middleware Monitoring

SRE COMPETENCIES (IN PROGRESS / EXPANDING)

- Kubernetes & Container Orchestration — understanding of pod scheduling, health probes, HPA for service reliability
- Terraform / Ansible — Infrastructure as Code for reproducible environment provisioning
- Prometheus + Alertmanager — complementary open-source monitoring stack alongside existing Grafana/ELK setup
- Azure Monitor & Log Analytics — cloud-native observability aligned with Microsoft Azure certification path
- Distributed Tracing — concepts of OpenTelemetry, Jaeger for microservices observability
- Chaos Engineering — controlled failure injection principles (GameDays) to proactively improve resilience
- SLO/SLI Definition & Error Budget Management — formalizing reliability targets across banking services

CERTIFICATIONS

Microsoft Certified (Featured)

- Microsoft Certified: Fabric Analytics Engineer Associate — Dicoding Indonesia, 2026
- Microsoft Certified: Azure AI Fundamentals — Dicoding Indonesia, 2026

Additional Certifications (2025–2026)

- Applied Data Science with Microsoft Fabric — Dicoding Indonesia, 2025
- Generative AI Application Development with Microsoft Azure — Dicoding Indonesia, 2025
- Data Processing Fundamentals — Dicoding Indonesia, 2025
- Machine Learning for Beginners — Dicoding Indonesia, 2025
- Fundamentals of Structured Query Language (SQL) — Dicoding Indonesia, 2025
- Introduction to Programming with Python — Dicoding Indonesia, 2025
- Fundamentals of Artificial Intelligence (AI) — Dicoding Indonesia, 2025
- Fundamentals of Data Science — Dicoding Indonesia, 2025

- Discover AI in Daily Life — Google for Education, 2025

EDUCATION

Bachelor of Information Systems

Graduated 2021

Nusa Mandiri University — GPA: 3.28 / 4.00

Diploma of Management Information Systems

Graduated 2016

Bina Sarana Informatika University — GPA: 3.23 / 4.00

ADDITIONAL INFORMATION

Languages: Indonesian (Native), English (Professional Working Proficiency)

Portfolio: Built a personal SRE portfolio website (React + TypeScript) showcasing live infrastructure monitoring demos, case studies, and project highlights — demonstrating hands-on frontend and systems thinking beyond day-to-day ops work.
